

The closest EV charger is your own

Join the 8,000+ people who never worry about range.
Enjoy smart, NZ-made EV charging that just works.

evnex

Safe, speedy, and solar-friendly home charging

PROTECT FROM OVERLOADS

Your home is a safe space. Keep it that way with built-in home overload protection that looks after your home during periods of heavy power use.

CHARGE WITH SOLAR POWER

All Evnex home chargers are solar chargers. Use your home set-up to charge with solar only, or a mix of solar and grid power — it's up to you!

MAKE RANGE ANXIETY DISAPPEAR

A home charging station is four times faster than your wall plug. Get up to 50km of charge per hour with an E2 model, or 120km per hour with our three-phase charger.

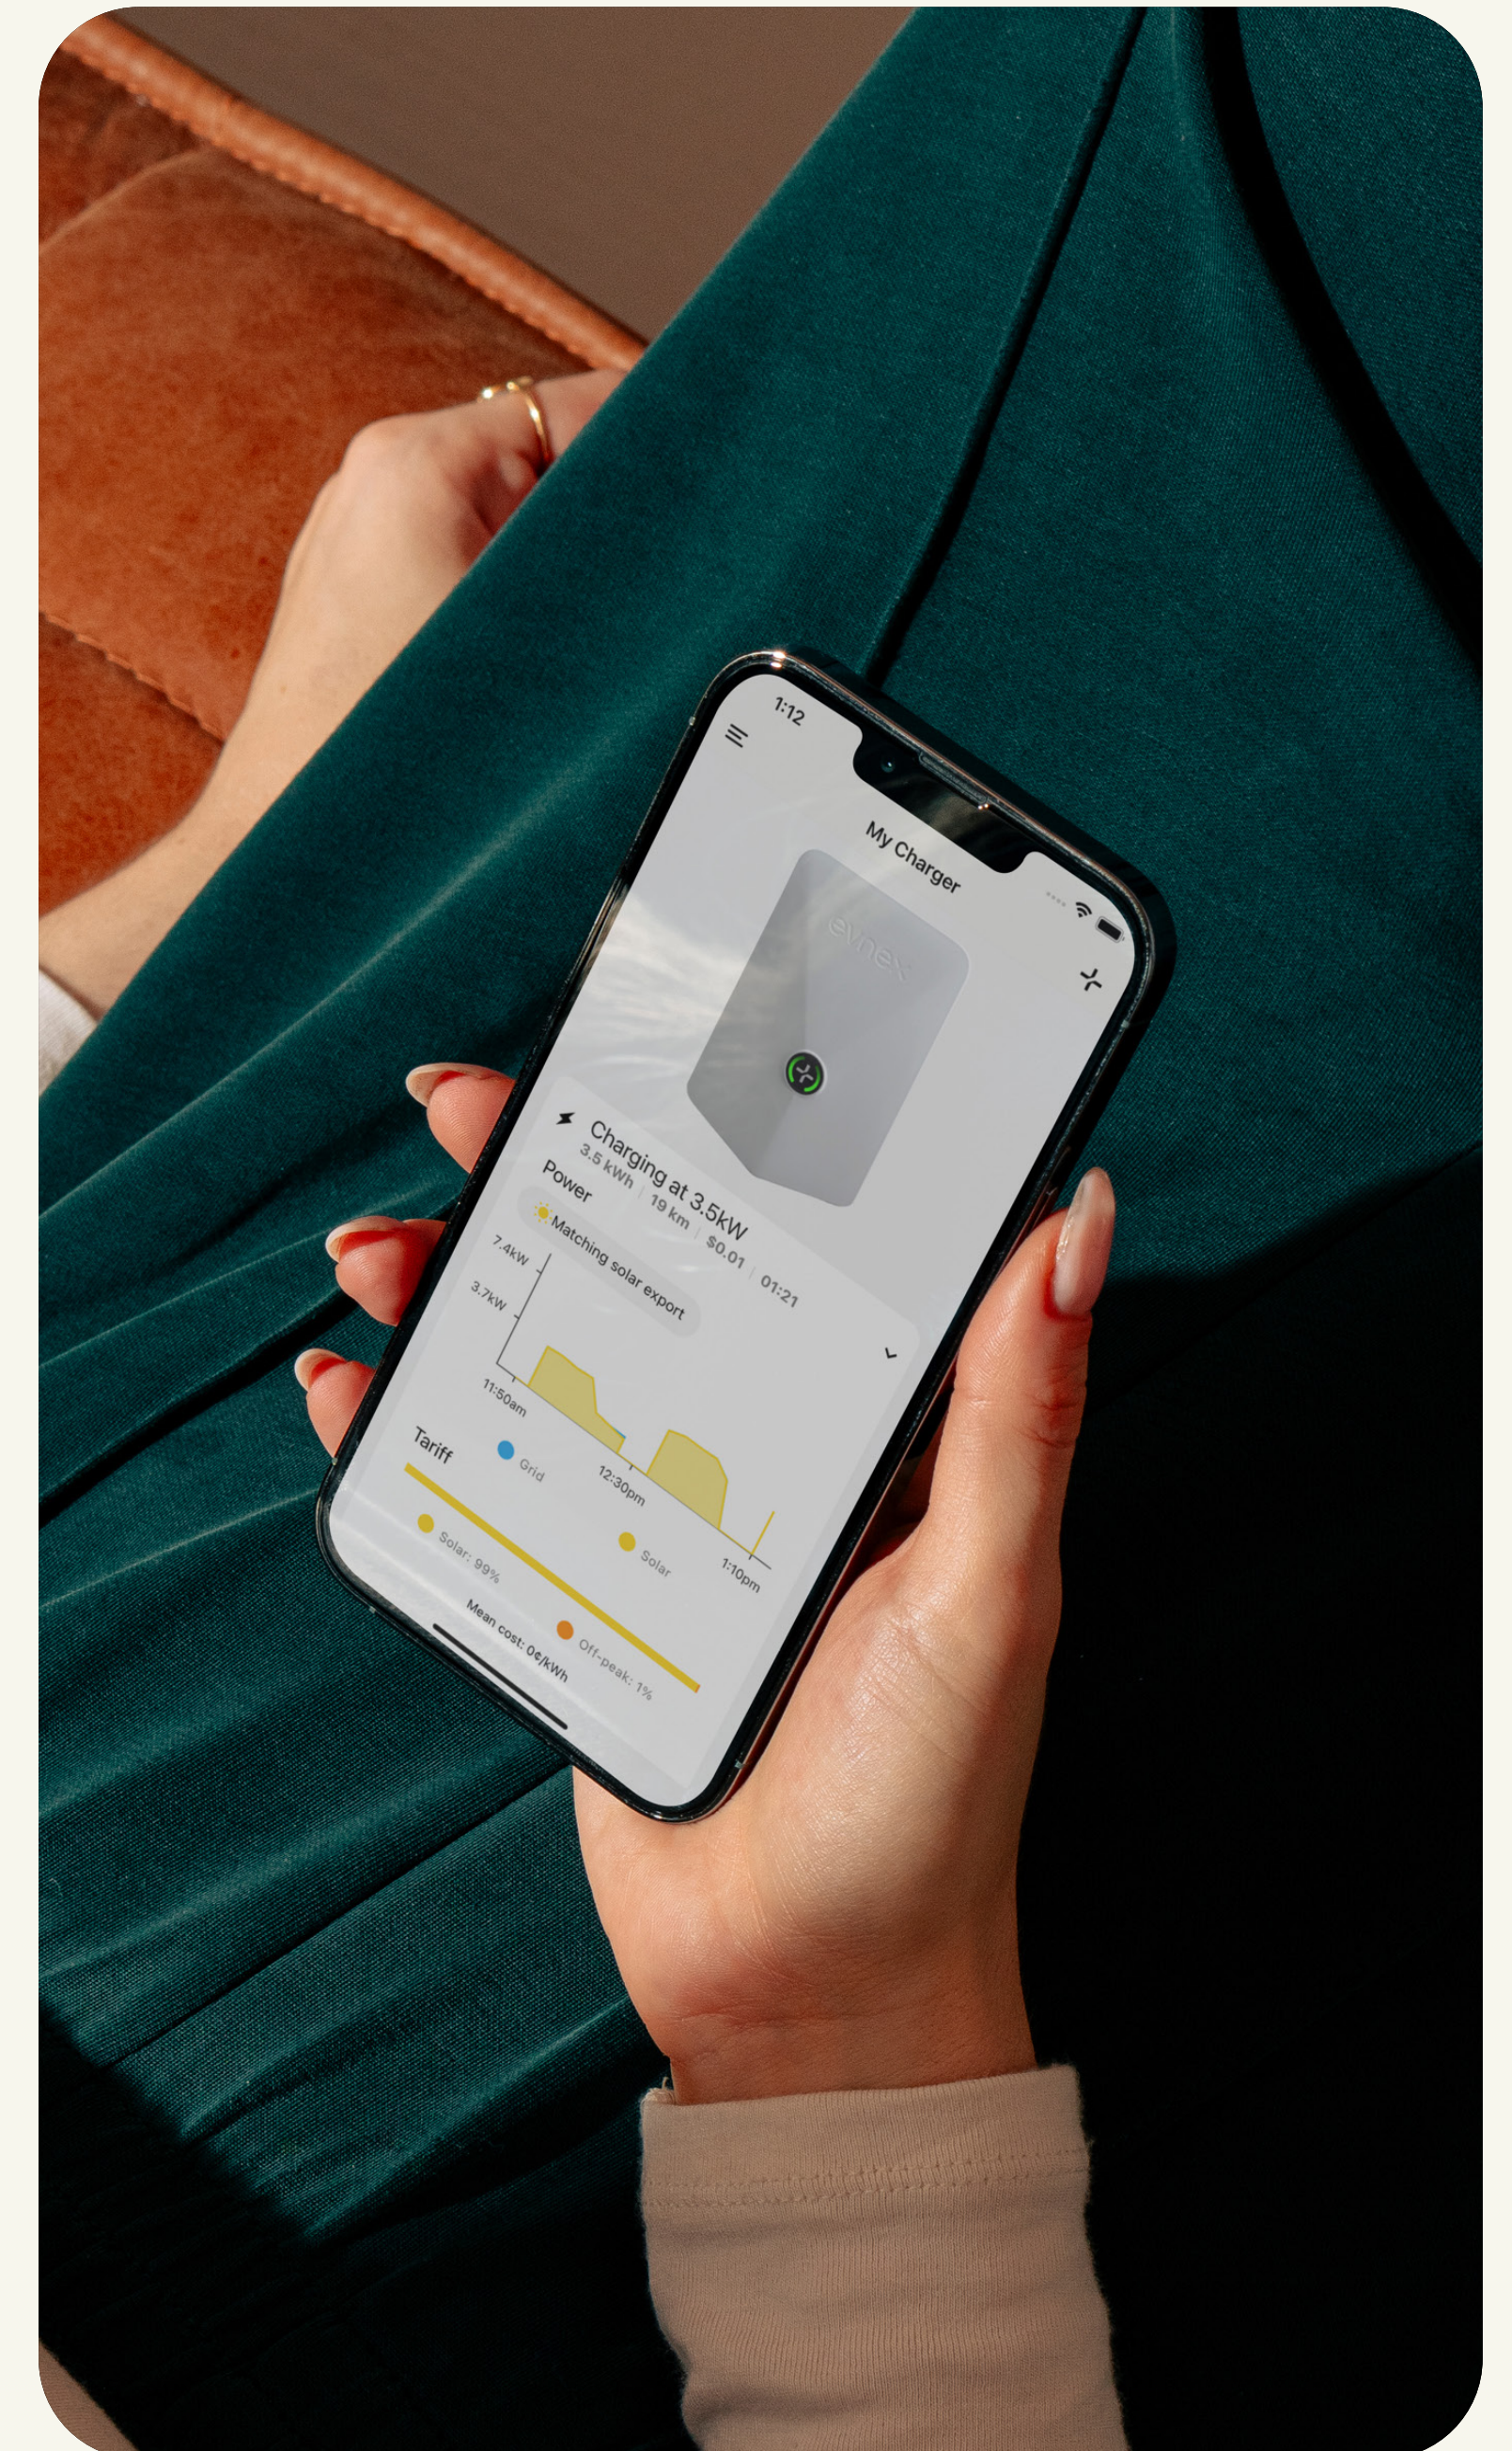

CONTROL AT YOUR FINGERTIPS

The Evnex driver app gives you complete overview and control of charging behaviour. Schedule charging sessions, monitor costs and emissions, and set up solar diversion.

Compare home charging options

Proudly designed and made by our team in New Zealand

Our E2 charger is designed to pay tribute to New Zealand's stunning natural beauty through a palette of inspired colours that capture the essence of its diverse geography.

Every detail—from the bio-circular plastic enclosure to the recycled cardboard packaging—is designed to support our vision of a future where every journey is powered by clean, affordable energy.
